Dear Accenture Hiring Team,

I am writing to express my strong interest in the Packaged Application Development Senior Analyst (Packaged/SaaS Application Engineer) position in Hyderabad. With 3+ years of experience in Microsoft Cloud (Azure) application architecture, application support, troubleshooting, monitoring, and performance optimization, I am well positioned to configure and support packaged or SaaS applications, adapt features, manage releases, and ensure system stability.

My experience aligns closely with this role. I have hands-on proficiency in Microsoft Cloud Enterprise Architecture and a strong understanding of cloud computing principles and architecture. I design, develop, and deploy enterprise-grade solutions using Generative and Agentic AI frameworks, applying prompt engineering and AI evaluation frameworks to drive innovation, efficiency, and business transformation. I configure and support packaged or SaaS applications to adapt features, manage releases, and ensure system stability, using standard tools, APIs, and low-code platforms to align solutions with business needs while preserving compatibility and performance.

I have experience with application support and troubleshooting methodologies, system monitoring tools, and performance optimization techniques. I document technical processes and solutions clearly, collaborate with cross-functional teams to enhance system performance and reliability, and assist in the development and implementation of best practices for application support. I am able to perform independently and become an SME, actively participate in team discussions, and contribute solutions to work-related problems.

I am confident my Microsoft Cloud application architecture background, application support and troubleshooting experience, and AI-first mindset make me the right fit for this role.

I look forward to discussing how I can contribute to Accenture's application development team.

Best regards,
Ishwar Kalmegh
