Dear Bluehost Hiring Team,

I am writing to express my strong interest in the DevOps Engineer position at Bluehost. With 3+ years of experience owning pipelines, cloud-native infrastructure, and observability that keep platforms fast, safe, and reliable, I am well positioned to help Bluehost's teams ship fast without breaking things.

My experience aligns closely with this role. I design, build, and operate Kubernetes and cloud-native infrastructure across AWS, GCP, and Azure, covering compute, storage, networking, and IAM. I own Infrastructure as Code using Terraform version-controlled in Git across environments. I build and maintain CI/CD pipelines with Jenkins and Argo (CD/Workflows), automating build, test, and release for dozens of services, and I drive release and deployment management practices including progressive rollouts, rollback strategy, and change management. I configure and harden web servers (Apache/Nginx), virtual hosts, and SSL/TLS across environments. I build observability, metrics, tracing, and log aggregation with Prometheus, Grafana, ELK/Loki, and actionable alerting. I use AI across the delivery lifecycle — scripting, infrastructure code, root-cause investigation, and runbooks — while setting guardrails: reviewing generated infrastructure code before production, checking provenance and licensing, and bounding what customer or secret data enters a prompt. I own networking fundamentals in production: TCP/IP, DNS, firewalls (iptables/nftables), and load balancing across cloud and on-prem environments. I carry on-call rotation, lead incident response, and turn postmortems into concrete reliability improvements. I also bring strong Bash and Python scripting and working knowledge of Linux security fundamentals: TLS, SSH hardening, patch management, and IAM in cloud environments.

I am confident my DevOps/SRE background, cloud-native expertise, and AI-augmented delivery experience make me the right fit for Bluehost's DevOps Engineer role.

I look forward to discussing how I can contribute to Bluehost's platform engineering team.

Best regards,
Ishwar Kalmegh
