PROFESSIONAL SUMMARY

DevOps and SRE Engineer with 3+ years of experience owning pipelines, cloud-native infrastructure, and observability that keep platforms fast, safe, and reliable. Skilled in designing, building, and operating Kubernetes and cloud-native infrastructure across **AWS**, **GCP**, and **Azure** (compute, storage, networking, IAM). Own **Infrastructure as Code** with **Terraform** in **Git**; build and maintain **CI/CD** pipelines with **Jenkins** and **Argo CD/Workflows**; drive progressive rollouts, rollback strategy, and change management. Configure and harden **Apache/Nginx**, virtual hosts, and **SSL/TLS**; build observability with **Prometheus**, **Grafana**, **ELK/Loki**; own networking fundamentals (**TCP/IP**, **DNS**, **iptables**/**nftables**, load balancing). Carry on-call rotation, lead incident response, and turn postmortems into reliability improvements. Use AI across the delivery lifecycle with guardrails for AI-generated infrastructure code review, provenance/licensing checks, and customer/secret data boundaries.

SKILLS

Languages	Python, Bash, Go, JavaScript, TypeScript, SQL
Cloud & Infrastructure	AWS, GCP, Azure, Kubernetes, Docker, Docker Swarm, Terraform (IaC), Git, compute/storage/networking/IAM
CI/CD & GitOps	Jenkins, Argo CD, Argo Workflows, GitHub Actions, CI/CD pipelines, progressive rollouts, rollback, change management
Web Servers & Security	Apache, Nginx, virtual hosts, SSL/TLS, iptables, nftables, SSH hardening, TLS, Linux security fundamentals
Observability & Monitoring	Prometheus, Grafana, ELK, Loki, tracing, log aggregation, alerting, metrics
Networking	TCP/IP, DNS, firewalls, load balancing, cloud and on-prem networking
AI-Augmented Delivery	AI-generated infrastructure code review, provenance/licensing checks, secret/customer data boundaries, runbooks, root-cause investigation
Applications & Data	Node.js, Express.js, GraphQL, REST APIs, tRPC, PostgreSQL, MongoDB

WORK EXPERIENCE

Techsurvi Pvt. Ltd.
Nov 2025 – Present

Backend & DevOps Engineer

- Own pipelines, cloud-native infrastructure, and observability for production **Node.js** services on **AWS**, keeping the platform fast, safe, and reliable with ~**150 ms** average API latency.
- Own **Infrastructure as Code** using **Terraform** version-controlled in **Git** across environments for **AWS** (**EC2**, **Lambda**, **RDS**, **ECR**, **CloudFront**, **S3**).
- Build and maintain **CI/CD** pipelines using **Docker**, **Docker Swarm**, **Kubernetes**, and **GitHub Actions**; automate build, test, and release for multiple services.
- Drive release and deployment management: progressive rollouts, rollback strategy, and change management that reduce risk without slowing teams down.
- Configure and harden **Nginx** web servers, virtual hosts, and **SSL/TLS** across environments.
- Build observability with **Prometheus**, **Grafana**, **Loki**, **Promtail**, **Node Exporter**, **cAdvisor**; create real alerting that catches issues before customers do.
- Own networking fundamentals in production: **TCP/IP**, **DNS**, firewalls, and load balancing across cloud environments.
- Carry on-call rotation, lead incident response, and turn postmortems into concrete reliability improvements.
- Use AI across the delivery lifecycle — scripting, infrastructure code, root-cause investigation, runbooks — with guardrails for generated code review, provenance/licensing, and secret data boundaries.
- Write automation scripts and tooling in **Python** and **Bash**; apply Linux security fundamentals (TLS, SSH hardening, patch management, IAM).
- Developed a concurrent **Go** stress-testing application using Goroutines, Mutexes, and WaitGroups, improving availability by **60%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.

Skyfunnel.ai
Dec 2024 – Oct 2025

Software Development Engineer

- Operated production **tRPC** and **PostgreSQL** services, supporting incident triage, problem analysis, resolution, and post-fix validation.
- Resolved **100+ production issues**, reducing bug resolution time by **40%** through structured troubleshooting and root cause analysis.
- Improved **WhatsApp** and **Email** delivery reliability using exponential backoff retries, reducing recurring service interruptions.
- Built a concurrent **Go** email validation service that reduced backend load by **30%**, improving capacity and application performance.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.
Jan 2024 – Dec 2024

Full Stack Developer

- Developed and maintained scalable **React**, **Node.js**, and **PostgreSQL** applications, troubleshooting full-stack application and data issues.
- Migrated a legacy frontend to React + Tailwind CSS, improving performance by **20%**, and integrated the **PhonePe API** with secure transaction handling.
- Developed an **Electron** desktop application for synchronized **MongoDB** and **PostgreSQL** data management.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub
Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub
Next.js • Supabase • PostgreSQL • Vapi

- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo
Go • Ebiten • Game Development

- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
