Dear BMC Helix Hiring Team,

I am writing to express my strong interest in the DevOps Engineer position at BMC Helix. With 3+ years of experience contributing to deployments and upgrades of SaaS suites across global data centers, Kubernetes infrastructure, Terraform IaC, and Jenkins/Spinnaker CI/CD pipelines, I am well positioned to shape the future of ITOM delivery.

My experience aligns closely with this role. I contribute to monthly deployments and upgrades of SaaS suites across 20+ global data centers, and semi-annual upgrades of services like Victoria Metrics, OpenSearch, Redis, and Kafka across AWS, Oracle, and Google Cloud. I migrate customers between instances, apply hotfixes, implement change requests, and resolve service requests. I remediate monitoring alerts, contribute to automation initiatives, and implement reliable processes that scale.

I have strong experience with Kubernetes, including Helm charts, and containerization with Docker. I am proficient in Shell scripting (Bash) with additional automation in Python. I build and maintain CI/CD pipelines using Jenkins and Spinnaker following best practices. I use Terraform for Infrastructure as Code and Ansible for configuration management, with Git for version control and JIRA for project tracking. I have experience with AWS, Google Cloud, and Oracle Cloud, including AWS managed services such as Kafka, OpenSearch, ElastiCache, and Postgres/RDS. I also work with monitoring tools such as Kibana and Fluentbit.

I am confident my DevOps background, Kubernetes/Helm expertise, CI/CD experience with Jenkins and Spinnaker, and multi-cloud experience make me the right fit for BMC Helix's DevOps Engineer role.

I look forward to discussing how I can contribute to BMC Helix's ITOM delivery team.

Best regards,
Ishwar Kalmegh
