Dear Cisco Hiring Team,

I am writing to express my strong interest in joining Cisco's Intersight development team as part of the Data Center Compute portfolio. With 3+ years of experience designing and implementing software systems with high emphasis on scalability and availability, I am well positioned to help shape the future of compute, network, and storage management technology.

My experience aligns closely with this role. I have hands-on expertise in Go (Golang) for backend development, building and managing microservices architecture on SaaS enterprise software and cloud infrastructure. I am proficient in Docker containerization and Kubernetes environments, with experience deploying and operating on AWS. I apply solid Object-Oriented Concepts and Design and am fundamentally strong in Data Structures and Algorithms. I have strong analytical and debugging skills and a system-level focus with an understanding of the impact of every component.

I design and implement software systems with high emphasis on scalability and availability, work within fast-moving start-up-like environments, and deliver solid code with broad business impact. I bring excellent communication skills, a strong sense of ownership, accountability, and a passion for quality and doing the right thing for customers, the product, and the company.

I am confident my Go, Docker, Kubernetes, AWS, microservices, and system design background make me the right fit for Cisco's Intersight development team.

I look forward to discussing how I can contribute to Cisco's Data Center Compute portfolio.

Best regards,
Ishwar Kalmegh
