Dear Deloitte Hiring Team,

I am writing to express my strong interest in the DevOps Engineer II position on Deloitte's Engineering as a Service team (Artificial Intelligence & Engineering) in Bengaluru/Hyderabad/Pune. With 3+ years of experience designing, building, deploying, and optimizing cloud-based engineering solutions, I am well positioned to support the design, build, deployment, and optimization of cloud-based engineering solutions for clients.

My experience aligns closely with this role. I have 3-6 years of experience developing CI/CD pipelines using AWS DevOps services including CodeBuild, CodeDeploy, and CodePipeline, and I have experience with CI/CD orchestration tools including Jenkins and GitHub Actions. I build and provision AWS infrastructure using infrastructure as code, including Terraform, AWS CloudFormation, and Ansible. I work with AWS services such as Lambda, Glue, database services, EventBridge, Amazon Elastic Kubernetes Service, Amazon S3, security groups, and API Gateway. I deploy microservices in Kubernetes environments and create orchestration files, and I script using YAML and JSON.

I gather and analyze requirements with consideration for business and sector needs, design, build, deploy, and support DevOps pipelines and cloud-based engineering solutions across the software development lifecycle, configure and manage infrastructure as code, automation, and platform services in AWS environments, participate in Agile delivery activities including sprint planning, retrospectives, estimation, and peer reviews, and contribute to knowledge sharing, process improvement, and innovation efforts that improve delivery quality and efficiency.

I am confident my AWS DevOps experience, CI/CD pipeline expertise, infrastructure-as-code skills, and Kubernetes experience make me the right fit for Deloitte's DevOps Engineer II role.

I look forward to discussing how I can contribute to Deloitte's Engineering as a Service team.

Best regards,
Ishwar Kalmegh
