Dear IDfy Hiring Team,

I am writing to express my strong interest in the Module Lead - Full Stack position at IDfy. With 3+ years of full-stack experience building and shipping features and fixes, I am well positioned to design, develop, unittest, instrument, and deploy code while ensuring clean and secure code.

My experience aligns closely with this role. I have strong frontend experience in React and backend experience in JavaScript, Python, and Golang. I work with relational databases such as PostgreSQL and MySQL, and I have experience working with production systems. I apply OOP and FP principles with clean coding practices (SOLID), and I understand containers and tools like Docker. I have experience working with cloud services, preferably GCP and AWS. I bring clear and unambiguous communication, both written and verbal.

I build and ship features and fixes, design and document features and components, develop, unittest, instrument, and deploy code, and ensure my code is clean and secure. I collaborate and brainstorm with colleagues, continuously learn and grow in my area of expertise, and support and maintain my product. I also have good-to-have experience with Kubernetes, Redis, and AI APIs and tools.

I am confident my full-stack background, React and backend skills, database experience, and clean coding practices make me the right fit for IDfy's Module Lead - Full Stack role.

I look forward to discussing how I can contribute to IDfy's product team.

Best regards,
Ishwar Kalmegh
