Dear Ivanti Hiring Team,

I am writing to express my strong interest in the Site Reliability Engineer position at Ivanti. With 3+ years of relevant industry experience deploying, managing, and securing production SaaS environments on AWS and Azure, I am well positioned to help take Ivanti Cloud services to the next level with observability, release automation, and chaos engineering.

My experience aligns closely with this role. I deploy, manage, and secure production SaaS environments in AWS and Azure. I work with geographically dispersed, cross-departmental teams to solve difficult problems. I automate common and repetitive tasks, write documentation and training material, and train colleagues. I participate in on-call rotations for 24x7 coverage (follow-the-sun model) for incident response, issue triage, and problem resolution.

I have proficiency with Python and Golang, and proficiency working with Bash programmatically. I have familiarity with public cloud platforms (AWS and Azure). I have experience troubleshooting Java and .NET applications, network and storage infrastructure issues. I have experience working with core Linux distributions (Debian, RHEL), Windows, and databases including PostgreSQL, Redis, Kafka, MongoDB, and Elasticsearch. I can configure and fine-tune HA Proxy, Apache, Nginx, and IIS, and configure New Relic, DataDog, and Splunk monitoring tools. I am familiar with container orchestration technologies (AWS EKS, Azure AKS), and have experience with deployment pipeline tools (Ansible, Jenkins, GitHub Actions) and Infrastructure as Code (IaC). I bring strong verbal and written communication skills in English for global collaboration.

I am confident my SRE background, cloud infrastructure experience, automation mindset, and observability expertise make me the right fit for Ivanti's SRE role.

I look forward to discussing how I can contribute to Ivanti's SRE team.

Best regards,
Ishwar Kalmegh
