Dear JPMorganChase Hiring Team,

I am writing to express my strong interest in the Technology Support III - DevOps, SRE position within the Chief Technology Office team in Hyderabad. With 3+ years of experience ensuring the operational stability, availability, and performance of production application flows, I am well positioned to troubleshoot, maintain, escalate, and resolve production service interruptions for internally and externally developed systems.

My experience aligns closely with this role. I have hands-on expertise with observability and monitoring using Prometheus, Grafana, Splunk, and Open Telemetry; CI/CD pipelines with Jenkins (including global libraries), Docker, GitHub Actions, and Git; infrastructure as code with Terraform; container orchestration with Kubernetes; and AWS and on-premises cloud environments. I apply SLIs/SLOs, incident response, and ITIL-aligned incident, problem, and change management to drive root-cause analysis and continuous improvement. I also use enterprise-authorized AI capabilities for incident triage and trend analysis, always validating outputs and handling operational data with security and sensitivity in mind, escalating when uncertain.

I am comfortable participating in on-call rotations and responding to production incidents, and I bring strong communication skills for collaborating with business and technology stakeholders. I am confident my DevOps/SRE background, automation mindset, and focus on validated remediation make me the right fit for this role.

I look forward to discussing how I can contribute to JPMorganChase's technology operations team.

Best regards,
Ishwar Kalmegh
