Dear Kion Hiring Team,

I am writing to express my strong interest in the DevOps Engineer position at Kion in Pune. With 3+ years of experience owning the operation, automation, maintenance, and development of internal DevOps tools and platforms, I am well positioned to support day-to-day operations and deliver automation and platform improvement initiatives.

My experience aligns closely with this role. I administer, maintain, troubleshoot, and improve developer tools and supporting infrastructure including Jenkins, GitHub, Jira, Confluence, SonarQube, JFrog Artifactory, Azure, Terraform, Ansible, Docker, Kubernetes, and Nginx. I develop and maintain CI/CD pipelines supporting reliable build, test, and deployment workflows. I operate and troubleshoot Linux-based services, including configuration, access, networking, and TLS certificates. I investigate application logs, pipeline failures, and infrastructure issues, collaborating with developers to identify root causes. I automate recurring tasks and infrastructure configuration using scripts and automation tools, and I support containerized workloads and Kubernetes environments. I analyze interfaces and dependencies between tools and services to develop effective integrated solutions, evaluate new tools and improvements, validate their suitability, and coordinate rollouts with other teams. I plan and execute changes with appropriate testing, recovery arrangements, and documentation, and I balance operational support with project work, proactively identifying and delivering improvements.

I bring Java knowledge beneficial for understanding application behavior and troubleshooting, and I value depth of practical experience in several relevant areas with the ability to transfer that knowledge to unfamiliar tools. I have experience administering platforms, including configuration, permissions, upgrades, and troubleshooting.

I am confident my DevOps background, platform administration experience, and automation mindset make me the right fit for Kion's DevOps Engineer role.

I look forward to discussing how I can contribute to Kion's DevOps team in Pune.

Best regards,
Ishwar Kalmegh
