Dear Kong Hiring Team,

I am writing to express my strong interest in the Software Engineer II position on Kong's Bangalore-based API Operations team. With 3+ years of experience building high-performance software with Golang, designing CLI-first experiences, and working with cloud platforms, IaC tools, and API workflows, I am well positioned to build out Kong's API Operations toolset.

My experience aligns closely with this role. I have 3+ years of experience building high-performance software with Golang, including CLI tools and backend services. I have hands-on experience with AWS, a major cloud platform. I have prior operations experience with Infrastructure-as-Code tools including Terraform. I have experience building APIs, standardizing APIs, and creating API workflows. I make CLI tools work for both humans and automation, including inside GitHub Actions and Jenkins. I design software systems with high emphasis on scalability and availability, and I work in fast-paced environments moving with high velocity.

I bring strong verbal and written communication skills to effectively collaborate across teams, and I am eager to join a fast-paced pre-IPO startup. I am confident my Go, CLI tooling, API Operations, IaC, and cloud experience make me the right fit for Kong's Software Engineer II role.

I look forward to discussing how I can contribute to Kong's API Operations toolset.

Best regards,
Ishwar Kalmegh
