Dear Thales Hiring Team,

I am writing to express my strong interest in the Backend Developer position at Thales in India. With 3+ years of experience building and maintaining robust backend services that power applications, I am well positioned to design, develop, and maintain scalable backend services using Go (Golang) and Python.

My experience aligns closely with this role. I have hands-on expertise in Golang and Python for backend development, building and managing RESTful APIs and microservices, and working with PostgreSQL and Redis for efficient data storage and caching. I develop and deploy applications in Docker containers using Kubernetes for orchestration, and I collaborate with DevOps to deploy and monitor applications on AWS cloud infrastructure (EC2, ECS/EKS, S3, RDS, IAM). I also participate in code reviews, testing, and debugging to ensure high code quality and system reliability, contribute to architectural decisions, and maintain and improve CI/CD pipelines for backend services. I bring strong problem-solving skills and experience troubleshooting and resolving performance and scalability issues in agile team environments.

I am confident my backend development background, Go and Python proficiency, and cloud-native experience make me the right fit for Thales' Backend Developer role.

I look forward to discussing how I can contribute to Thales' engineering team.

Best regards,
Ishwar Kalmegh
