Dear VOIS Hiring Team,

I am writing to express my strong interest in the AWS Kubernetes DevOps Engineer position within GT Group Data Centres at VOIS (Vodafone Intelligent Solutions). With 3+ years of experience designing and operating secure, scalable Kubernetes and Amazon EKS environments on AWS, I am eager to contribute to VOIS's business-critical cloud-native infrastructure.

My experience aligns closely with this role. I have hands-on expertise provisioning AWS infrastructure (VPC, EC2, EKS, S3, IAM, CloudWatch) with Terraform reusable modules, implementing GitOps continuous delivery with Argo CD and Helm chart deployments, and administering Kubernetes clusters (RBAC, network policies, Secrets, ConfigMaps, Deployments). I also bring Docker containerisation, CI/CD automation, observability (Prometheus, Grafana, Loki, CloudWatch), cloud-cost optimisation, and security/ compliance controls including ITIL and SOX-aligned practices.

What attracts me to VOIS is the opportunity to work with AWS cloud infrastructure and cloud-native technologies at scale across a global telco shared-services organisation serving 28 countries. I am confident my experience with Terraform, Amazon EKS, Argo CD, Helm, and GitOps, combined with my focus on reliability, observability, and security, makes me a strong fit for this role.

I look forward to discussing how I can contribute to VOIS's DevOps team.

Best regards, Ishwar Kalmegh +91-7218087576
