Dear Wipro Hiring Team,

I am writing to express my strong interest in the DevOps Engineer (Band B2) position at Wipro Limited in Pune. With 3+ years of experience in DevOps, CI/CD pipelines, Git commands, incident management, monitoring & observability, and TSM practices, I am well positioned to plan and execute the DevOps pipeline across the application life cycle.

My experience aligns closely with this role. I plan and execute DevOps pipelines supporting the application life cycle from planning, coding, building, testing, staging, release, configuration, and monitoring. I manage IT infrastructure per supported software code requirements and on-board applications on DevOps tools configured per client needs. I create user access workflows and provide user access per defined processes. I build and engineer DevOps tools per client customization suggestions and collaborate with development staff on coding and scripting to connect code elements required to run software releases with operating systems and production infrastructure.

I leverage tools to automate testing and deployment in DevOps environments and provide customer support/service on DevOps tools. I timely support internal and external customers on multiple platforms, resolve tickets raised on these tools within a specified TAT, ensure adequate resolution with customer satisfaction, and follow the escalation matrix/process when a resolution gets complicated or isn't resolved. I troubleshoot and perform root cause analysis of critical/repeatable issues.

I have hands-on experience with CI/CD pipelines and Git commands, incident management, monitoring & observability using Prometheus, Dynatrace, and Datadog, SLO/SLI, RCA, and TSM skills including incident management, change management, problem management, and ticketing tools.

I am confident my DevOps background, CI/CD pipeline expertise, SRE skills, and TSM experience make me the right fit for Wipro's DevOps Engineer role.

I look forward to discussing how I can contribute to Wipro's DevOps team in Pune.

Best regards,
Ishwar Kalmegh
