Dear Wolters Kluwer Hiring Team,

I am writing to express my strong interest in the DevOps Engineer position at Wolters Kluwer. With 3+ years of experience in Web Application Operations, Docker, Kubernetes, Terraform (IaC), CI/CD pipelines, full-stack monitoring, availability management, and disaster recovery on AWS and Azure, I am eager to contribute to your technology operations team.

My experience aligns closely with this role. I have hands-on expertise building and maintaining systems in AWS (EC2, VPC, IAM, S3, ELB, Route 53, CloudWatch, EKS, ECS, RDS, Lambda, ECR) and Azure (web apps, IIS, Service Environments, Service Fabric). I provision infrastructure with Terraform reusable modules, operate Kubernetes clusters on Amazon EKS, build and maintain CI/CD pipelines (GitHub Actions, Jenkins, GitLab CI), implement full-stack monitoring (Prometheus, Grafana, Loki, CloudWatch), and manage availability, change, release, and disaster recovery processes. I also script in Python, Bash, and PowerShell to automate toil.

What attracts me to Wolters Kluwer is the opportunity to work on complex, highly available and scalable solutions while growing with increasing independence. I am confident my DevOps/AppOps experience, cloud expertise, Terraform IaC skills, and focus on reliability and monitoring make me a strong fit for this role.

I look forward to discussing how I can contribute to Wolters Kluwer's technology team.

Best regards, Ishwar Kalmegh +91-7218087576
