Dear Zscaler Hiring Team,

I am writing to express my strong interest in the Senior Software Engineer position at Zscaler in Bangalore (hybrid), reporting to the Director of Software Engineering. With 3+ years of experience owning complex production systems and leading technical initiatives from problem definition through production operation, I am well positioned to lead key product capabilities for Zscaler's AI security products.

My experience aligns closely with this role. I design secure, reliable, and scalable distributed systems with clearly defined trust boundaries, balancing security, privacy, performance, reliability, and usability. I have strong proficiency in Go, Rust, and Python, with deep expertise in systems engineering, distributed systems, security engineering, and backend platforms. I understand concurrency, networking, storage, APIs, and operational observability, and I manage cloud infrastructure on AWS, a major hyperscaler.

I have a foundational understanding of AI/ML technologies and experience leveraging AI-driven solutions. I lead complex investigations, improve engineering practices, testing, and operational readiness, and I mentor engineers through design and code reviews. I thrive in ambiguity, act like an owner, and bring a growth mindset to a dynamic, high-trust team environment.

I am confident my backend platform, security engineering, Go/Rust/Python, and cloud experience make me the right fit for Zscaler's Senior Software Engineer role.

I look forward to discussing how I can contribute to Zscaler's mission of making doing business seamless and secure.

Best regards,
Ishwar Kalmegh
