ADP Hiring Team
Bangalore, India

Subject: Application for Associate Software Engineer - DevOps & Kubernetes

Dear Hiring Team,

I am writing in response to your Associate Software Engineer - DevOps & Kubernetes opening in Bangalore. With 3+ years of experience in DevOps/SRE, I have hands-on experience supporting cloud-native applications with Docker, Kubernetes, Microsoft Azure, GitHub Actions, and CI/CD automation.

My background includes building and maintaining pipelines, container orchestration, infrastructure automation with Shell/Python, and implementing observability with Prometheus, Grafana, and logging solutions. I have also handled incident response, troubleshooting, and root-cause analysis while maintaining runbooks and documentation.

I am eager to learn, take ownership, and contribute to ADP's reliability goals by reducing toil through automation, improving observability, and supporting stable, secure releases. I look forward to collaborating with your development, QA, and platform teams to strengthen operational readiness.

Please find my resume attached for your review. I look forward to discussing how I can support ADP's DevOps & Kubernetes initiatives.

Sincerely,
Ishwar Kalmegh
