Hiring Team, Air Arabia
Sharjah, United Arab Emirates

Dear Hiring Team,

I am writing to apply for the Java Site Reliability Engineer role. As a reliability-focused engineer with nearly two years of experience supporting Java/Spring Boot enterprise applications and mission-critical production systems, I am excited by the opportunity to help maintain the availability and performance of Air Arabia's airline platforms.

My experience aligns closely with the responsibilities of this role:

- **Java Application Support:** Supported and debugged Java (Spring Boot) microservices and REST APIs in production, delivering bug fixes and enhancements that improved stability and performance.
- **Incident Investigation & RCA:** Investigated production incidents through application logs, system/JVM metrics, and monitoring data, identified root causes, and escalated complex issues appropriately.
- **Monitoring & Observability:** Operated alerting and observability tooling with Grafana, Prometheus, Splunk, and Kibana, and flagged coverage gaps while performing routine health checks and capacity/performance reviews.
- **CI/CD, Containers & Operations:** Executed Jenkins CI/CD pipeline runs, deployments, and release tasks, operated containerized apps on Docker/Kubernetes, and performed scheduled patching and backups following change procedures.

I am comfortable in an on-call rotation, document incident resolutions in runbooks and knowledge bases, and work collaboratively with engineering and SRE teams while meeting compliance and regulatory requirements. I am confident I can contribute to Air Arabia's reliability goals from day one.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

Ishwar Kalmegh
