13 October 2026

Dear Hiring Team,

I am writing to apply for the **Associate – AWS DevOps Engineer** position in Mumbai. I have 3+ years of experience designing, deploying, and operating production infrastructure on AWS, and the work you have described — infrastructure as code, CI/CD automation, container orchestration, and cloud security fundamentals — is the work I already do day to day.

At Techsurvi Pvt. Ltd. I design and operate highly available AWS infrastructure — EC2, VPC, S3, RDS, ELB/ALB, ECR and CloudFront — provisioned as code with Terraform and configured with Ansible. I build and maintain the CI/CD pipelines that carry every change from commit to production: Jenkins and GitHub Actions pipelines that build and test container images, scan them, and deploy them to Kubernetes on EKS and Amazon ECS. Before that, at Skyfunnel.ai, I shipped and supported production backend services on cloud infrastructure and resolved over a hundred production incidents, cutting resolution time by 40% through disciplined root-cause analysis.

Beyond delivery, I treat the platform as something to be operated well. Monitoring, logging, and alerting run through CloudWatch, CloudTrail, Prometheus, Grafana and ELK-style centralised logging. I apply least-privilege IAM policies, security groups, NACLs, and encryption at rest and in transit. I automate the repetitive parts — provisioning, configuration, and deployment — with Python and Bash, and I document infrastructure setup and CI/CD workflows so that the next person can pick it up without guesswork.

- **AWS:** EC2, VPC, S3, IAM, ELB/ALB, RDS, CloudWatch, CloudTrail, Auto Scaling, Route 53, ECR, ECS, EKS, Lambda, API Gateway
- **Infrastructure as Code:** Terraform, CloudFormation, AWS CDK, Ansible
- **CI/CD:** Jenkins, AWS CodePipeline, CodeBuild, GitHub Actions
- **Containers:** Docker, Docker Swarm, Amazon ECS, Kubernetes on EKS
- **Scripting:** Python, Bash, PowerShell, Go

What draws me to this role is the advisory setting: the chance to work shoulder to shoulder with development, operations, and security teams and to own infrastructure end to end rather than one slice of it. At the associate level I am eager to deepen my AWS depth, take on the certification track, and grow into the full scope of the role — and I would welcome the chance to discuss how my experience fits your Mumbai team.

Thank you for your time and consideration.
