Hiring Team, Citi
Bengaluru, India

Dear Hiring Team,

I am writing to apply for the **Software Development Engineer (C10 Applications Development Analyst)** role. As a backend engineer with 3+ years of professional experience building scalable services in both Python and Java, I am excited by Citi's mission-critical enterprise platforms and the opportunity to contribute across the full SDLC in an Agile team.

My experience maps closely to the requirements of this role:

- **Python & Java Development:** Built and maintained backend services and RESTful APIs with Python (FastAPI/Flask) and Java (Spring Boot), applying clean code and SOLID principles.
- **APIs, Microservices & Messaging:** Designed secure REST APIs with OpenAPI/Swagger and implemented asynchronous, event-driven integrations using Apache Kafka and PostgreSQL.
- **Databases & Performance:** Worked with relational databases and ORMs (SQLAlchemy, Hibernate/JPA), optimizing schema, indexes, and query execution for throughput and latency.
- **Testing & Quality:** Wrote unit and integration tests with PyTest and JUnit/Mockito and resolved static analysis findings via SonarQube.
- **CI/CD, Containers & Support:** Containerized services with Docker, deployed to Kubernetes/OpenShift, automated releases through CI/CD, and supported L3 production issues using Prometheus, Grafana, and Splunk.

I enjoy collaborating with cross-functional teams, taking part in code reviews, and continuously improving reliability and performance. I am confident I can contribute to Citi's engineering goals from day one and grow within your team.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

Ishwar Kalmegh
