Cover Letter — Software Development Engineer, Backend (Golang) — Fox Corporation

Dear Hiring Manager,

I am writing to apply for the Software Development Engineer, Backend (Golang) position at Fox Corporation in Bengaluru. With 3+ years of experience building high-throughput, low-latency backend services and APIs, I am confident I can contribute to your Backend/API team powering consumer-facing platforms for FOX News Media, FOX Sports, Tubi, and FOX One.

At Techsurvi Pvt. Ltd., I designed and developed backend architecture using Node.js (Express, GraphQL) and AWS (Lambda, SQS, API Gateway, RDS, ECR, CloudFront, S3) with average API latency of 150 ms. I created event-driven architecture using AWS Lambda, SQS, and API Gateway handling 10K+ requests/day and reducing latency by 40%. I migrated MySQL RDS from version 8.0 to 8.4 with zero downtime, improving query performance by 25%, and built a GDPR-compliant webhook system using SQS, Lambda, and EventBridge processing 5K webhooks/day with dead-letter handling and replay strategy. I also developed a concurrent Go stress-testing application using goroutines, mutexes, and wait groups, improving availability by 60%.

At Skyfunnel.ai, I built production backend services using tRPC and PostgreSQL, resolved 100+ production issues reducing bug resolution time by 40%, enhanced email delivery with exponential backoff retry mechanisms, built a concurrent Go email validation service reducing backend load by 30%, and created a Zapier-like event automation feature triggering 200+ emails per event, reducing manual notification effort by 60%.

I bring strong Go programming skills (goroutines, channels, context, interfaces), REST/gRPC API design, distributed systems (fault tolerance, scalability, idempotency, retry/backoff), AWS cloud services, relational and NoSQL databases (PostgreSQL, MySQL, MongoDB, DynamoDB), CI/CD (Docker, GitHub Actions, Jenkins), automated testing, observability (logging, metrics, tracing, alerting), and AI-assisted development (Claude Code, GitHub Copilot, Cursor). I take end-to-end ownership from system design to production rollout and operations, and actively participate in code and design reviews.

I would welcome the opportunity to discuss how my experience building scalable, resilient backend systems aligns with Fox Corporation's needs. Thank you for your consideration.

Sincerely,
Ishwar Kalmegh
