Hiring Manager
DevOps Engineering

Dear Hiring Manager,

I am writing to express my interest in DevOps Engineer roles. As an engineer with up to 3 years of experience automating builds, deployments, and cloud infrastructure, I am excited by the opportunity to help your team deliver reliable, repeatable releases and well-operated production systems.

My experience aligns closely with what a DevOps role demands:

- **CI/CD Pipelines:** Build and maintain automated build, test, and deployment pipelines with Jenkins and GitHub Actions across production and non-production environments, including approvals, rollback, and release automation.
- **Infrastructure as Code & Configuration:** Provision and manage AWS infrastructure (EC2, VPC/Subnet, S3, IAM, RDS, EKS, Route 53, ALB) using Terraform, Ansible, and CloudFormation for consistent, repeatable environments.
- **Containers & Orchestration:** Containerize services with Docker and deploy them to Kubernetes (EKS) using Helm, supporting zero-downtime and GitOps-style delivery.
- **Monitoring, Automation & Operations:** Automate operations and eliminate toil with Python and Bash, and monitor applications and infrastructure with Prometheus, Grafana, ELK, Splunk, and CloudWatch, including incident response and root cause analysis.

I take ownership of deployments end to end, collaborate closely with development, QA, and operations teams, and continuously look for ways to make delivery faster, safer, and more reliable. I would be glad to bring this automation-first mindset to your engineering team.

Thank you for your time and consideration. I look forward to discussing how I can contribute to your team.

Sincerely,

Ishwar Kalmegh
