Cover Letter — Integration Engineer (Go / Event-Driven / AWS EKS)

Dear Hiring Manager,

I am writing to apply for the Integration Engineer role. With 3+ years of production Go experience and a strong background in event-driven integration on AWS, I am confident I can help design and build reliable integration services and APIs for your team.

In my current role at Techsurvi Pvt. Ltd., I designed backend architecture using Node.js and AWS (Lambda, SQS, API Gateway, RDS), built CI/CD pipelines with Docker and GitHub Actions, and implemented centralized monitoring. I led a complete AWS architecture setup for a client using Lambda, SQS, and API Gateway; created AWS billing alerts to cap spend; migrated MySQL RDS from version 8.0 to 9.7; and built a GDPR-compliant webhook system using SQS, Lambda, and EventBridge with dead-letter handling and replay strategy. I also developed a concurrent Go stress-testing application using goroutines, mutexes, and wait groups, improving availability by 60%.

Previously at Skyfunnel.ai, I built production backend services with tRPC and PostgreSQL, enhanced email delivery with exponential backoff retry mechanisms, built a concurrent Go email validation service reducing backend load by 30%, and created a Zapier-like event automation feature that triggers emails on specific events. At Bizonance India Pvt. Ltd., I developed full-stack applications with React, Node.js, and PostgreSQL, and migrated a complete server from Windows to Linux (Hostinger).

I bring hands-on gRPC/REST API design, integration patterns (idempotency, retry/backoff, circuit breaker, saga/compensation, outbox), canonical data modeling, observability (structured logging, metrics, tracing, alerting), containerization (Docker, Kubernetes/EKS, Helm), and AI-assisted development (Claude Code, GitHub Copilot, Cursor) with review discipline to ensure quality and security.

I would welcome the opportunity to discuss how my experience building event-driven integration flows and production Go services aligns with your needs. Thank you for your consideration.

Sincerely,
Ishwar Kalmegh
