Cover Letter - GoKwik DevOps Engineer

Dear GoKwik Hiring Team,

I am writing to express my strong interest in the DevOps Engineer position at GoKwik. With 3+ years of experience building scalable CI/CD pipelines, managing Kubernetes infrastructure on AWS, and implementing observability stacks, I am excited by the opportunity to contribute to GoKwik's mission of powering 15,000+ D2C merchants worldwide.

My experience aligns well with GoKwik's focus on reliability at scale. I have hands-on expertise with Terraform for infrastructure as code, Kubernetes (EKS) for container orchestration, and GitHub Actions/Jenkins for automated CI/CD pipelines. I have implemented monitoring and alerting using Prometheus, Grafana, and Loki, and I am comfortable with on-call incident response and blameless postmortems. My scripting ability in Go and Python enables me to automate manual toil and build self-healing infrastructure.

What particularly attracts me to GoKwik is the opportunity to work on infrastructure that processes billions in GMV and serves thousands of merchants daily. I am eager to bring my fundamentals in Linux networking, distributed systems, and cloud security to help design resilient, self-healing infrastructure that can scale with GoKwik's growth.

I am confident that my experience with Terraform, Kubernetes, and CI/CD automation, combined with my passion for reliability and observability, makes me a strong fit for this role. I look forward to the possibility of discussing how I can contribute to GoKwik's DevOps team.

Best regards,
Ishwar Kalmegh
