Cover Letter — Senior Engineer, Infrastructure — The Hartford (GCC034)

Dear Hiring Manager,

I am writing to apply for the Senior Engineer, Infrastructure position at The Hartford. With 3+ years of experience designing, implementing, and operating cloud-native database and infrastructure solutions on AWS and Google Cloud, I am confident I can contribute to your team supporting scalable, secure, and high-performing cloud database solutions.

At Techsurvi Pvt. Ltd., I designed reliable infrastructure using AWS (EC2, RDS, Lambda, SQS, API Gateway, S3, CloudFront, VPC, IAM) with average API latency of 150 ms. I built automated CI/CD pipelines using Docker, Docker Swarm, GitHub Actions, and Jenkins. I implemented monitoring and alerting using Prometheus, Grafana, Loki, Promtail, Node Exporter, and cAdvisor. I created AWS billing alerts keeping monthly cloud spend within a $5K limit. I migrated MySQL RDS from version 8.0 to 8.4 with zero downtime, improving query performance by 25%. I also created event-driven architecture using AWS Lambda, SQS, API Gateway, and EventBridge handling 10K+ requests/day and reducing latency by 40%, and built a GDPR-compliant webhook system using SQS, Lambda, and EventBridge processing 5K webhooks/day with dead-letter handling and replay strategy.

At Skyfunnel.ai, I developed production backend services using tRPC and PostgreSQL, resolved 100+ production incidents reducing bug resolution time by 40% through incident response and root-cause analysis, enhanced WhatsApp and Email delivery using exponential backoff retry mechanisms, built a concurrent Go email validation service reducing backend load by 30%, and created a Zapier-like event automation feature triggering 200+ emails per event reducing manual notification effort by 60%.

At Bizonance India Pvt. Ltd., I migrated a complete server from Windows to Linux (Hostinger), cutting hosting costs by 30% and improving uptime to 99.9%.

I bring hands-on experience with Terraform, CloudFormation, Ansible, Docker, Kubernetes, AWS, Python, Go, Shell/Bash, CI/CD (GitHub Actions, Jenkins), Git, ServiceNow, monitoring (Prometheus, Grafana, Loki, CloudWatch), Linux, networking (VPC, subnets, security groups), security best practices, incident response, on-call rotation, disaster recovery planning, and capacity planning. I am comfortable using AI tools as a productivity accelerator while retaining full ownership of technical decisions.

I am passionate about engineering excellence, continuous improvement, reducing complexity and cost in database environments through analysis, simplification, and automation. I would welcome the opportunity to discuss how my infrastructure engineering experience aligns with The Hartford's needs for reliable, secure, and scalable cloud database solutions. Thank you for your consideration.

Sincerely,
Ishwar Kalmegh
