Re: Cloud Developer — Hybrid Cloud, Bengaluru

Dear Hiring Team,

I am writing to apply for the **Cloud Developer** role in HPE Hybrid Cloud in Bengaluru. The combination of hybrid cloud work, Green Lake, and a hybrid model averaging two days a week from an HPE office is exactly the environment I want to grow in, and I believe the skills I have built over 3+ years map closely to what the role asks for.

In my current role at Techsurvi, I build and maintain cloud application modules for a Node.js and GraphQL backend running on **AWS** (EC2, Lambda, RDS, ECR, CloudFront, S3), holding average API latency at 150 ms and shipping features against defined specifications. I containerise services with Docker, deploy them as microservices on Kubernetes, and run the build, test, and release path through CI/CD pipelines on GitHub Actions. Alongside that, I designed test plans and automated unit and integration test cases for the modules I owned, and I handle production issues end to end — 100+ of them at my previous role, with resolution time reduced by 40% through systematic debugging and documented root causes. Services are instrumented with Prometheus, Grafana, Loki, Promtail, Node Exporter, and cAdvisor.

That end-to-end loop — develop the module, plan and automate the tests, deploy the code, debug what breaks, and keep it monitored and supported — is the core of the Cloud Developer job family as described, and it is what I do today. My programming experience spans Python, Golang, and JavaScript, which covers the languages the role asks for, alongside hands-on experience with the AWS and Azure cloud platforms, Linux virtualization with KVM and OpenVZ for hybrid deployments, and containerised Kubernetes environments.

What draws me to HPE specifically is Green Lake: the idea of building a simple, consumable cloud experience that delivers real business outcomes, rather than infrastructure for its own sake. I enjoy breaking down ambiguous problems, engineering new approaches rather than only applying known ones, and shipping end-to-end solutions, which is how I have read the Cloud Developer family definition. I also contribute comfortably across roles: sharing technical ideas with peers, writing up what I learn for others, and collaborating with project managers and development partners to keep delivery efficient.

I would welcome the opportunity to discuss how I can contribute to the Green Lake platform and to the Hybrid Cloud team in Bengaluru. Thank you for your time and consideration.

Warm regards,

Ishwar Kalmegh
