PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience building scalable data pipelines and cloud-native applications on **AWS**. Experienced in automated ingestion, processing, and optimisation with **Python**, **Apache Kafka**, **Apache Spark**, and **ClickHouse** over **PostgreSQL**, **MongoDB**, and **ArangoDB**, with **Redis**-backed message queues for streaming and async processing. Comfortable with **Linux**, shell scripting, **CI/CD**, and distributed systems, containerising on **Docker**/**Kubernetes** and surfacing data through **Elasticsearch**/**OpenSearch** and **Grafana**. Keeps data quality, reliability, and performance measurable via validation, alerting, and automated tests, with hands-on **Generative AI** and **Agentic AI** work.

SKILLS

Data Engineering	Data pipelines, ETL/ELT, ingestion, data quality & validation, data modelling, optimisation
Big Data & Streaming	Apache Kafka, Apache Spark, ClickHouse, ArangoDB, Airflow, consumer groups, backpressure, Redis Streams, SQS
Languages	Python, Java, Scala, SQL, Bash/shell, Go, TypeScript
Cloud	AWS (EC2, S3, RDS, Lambda, Glue, Redshift), Azure, GCP, Docker, Kubernetes, SQS, API Gateway, EventBridge
Databases	PostgreSQL, MongoDB, Redis, ClickHouse, ArangoDB, DynamoDB; NoSQL data modelling, MySQL
CI/CD	Jenkins, GitHub Actions, GitLab CI, Docker, CI/CD for data & ETL jobs
Search & Viz	Elasticsearch, OpenSearch, Kibana, Grafana, Prometheus
Systems	Linux, shell scripting, distributed systems, concurrency, microservices, REST APIs

WORK EXPERIENCE

Techsurvi Pvt. Ltd.

Nov 2025 – Present

Data & Cloud Engineer

- Designed and built automated **data pipelines** for ingestion, processing, and transformation — **Python** producers/consumers on **Apache Kafka**, **Spark** transformation jobs, landing in **ClickHouse**, **PostgreSQL**, and **S3** on **AWS**.
- Built **CI/CD** pipelines (**Jenkins**, **GitHub Actions**) that unit-test, schedule, and deploy ETL and application jobs, containerised on **Docker**/**Kubernetes**.
- Ensured data quality, reliability, and performance via schema/row-level validation, automated backfills, retry/backoff logic, and dead-letter handling on failed **Kafka** consumers.
- Made pipeline health measurable with centralised logging (**ELK**) and **Grafana**/**Prometheus** dashboards tracking throughput, consumer lag, latency, and error rates; built a concurrent **Go** load-generation service (**Goroutines**, **Mutexes**, **WaitGroups**) that improved availability by **60%**.
- Created event-driven architecture for a client using **AWS** (**Lambda**, **SQS**, **API Gateway**), handling 10K+ requests/day and reducing latency by **40%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.
- Created a **GDPR**-compliant webhook system using **SQS**, **Lambda**, and **EventBridge**, processing 5K webhooks/day with dead-letter handling and replay strategy.

Skyfunnel.ai

Dec 2024 – Oct 2025

Software Development Engineer

- Built production data and backend services with **Python**/**Node.js** and **PostgreSQL**, exposed as **REST APIs** for analytics consumers.
- Resolved 100+ production data and deployment issues, cutting resolution time **40%** via systematic debugging and root-cause analysis.
- Improved ingestion throughput with **Redis**-backed queues, exponential backoff retries, and idempotent processing; built a concurrent **Go** validation service, cutting backend load **30%**.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.

Jan 2024 – Dec 2024

Full Stack Developer

- Developed scalable applications with **React**, **Node.js**, and **PostgreSQL**, modelling relational data with migrations and indexes.
- Integrated the **PhonePe API** for secure transaction ingestion and reconciliation.
- Built an **Electron** desktop app syncing **MongoDB** and **PostgreSQL** data between local and central stores.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub

Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub
Next.js • Supabase • PostgreSQL • Vapi
- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo
Go • Ebiten • Game Development
- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
