Hiring Team, HSBC Software Development India
Bengaluru, India

Dear Hiring Team,

I am writing to apply for the Senior Consultant Specialist role. As a DevOps and release engineer with nearly two years of experience designing CI/CD pipelines, managing releases, and supporting critical production environments, I am excited by the opportunity to contribute to HSBC's reliable, repeatable delivery across development, UAT, pre-production, and production.

My experience aligns closely with the requirements of this role:

- **CI/CD & Release:** Designed and troubleshot Jenkins-based pipelines, built multi-stage deployment workflows, and managed releases, deployment documentation, and operational handovers.
- **Cloud & Automation:** Deployed cloud-native solutions on AWS with Docker and Kubernetes, and automated infrastructure and application deployment using Ansible, Helm, and shell scripting.
- **Monitoring & RCA:** Monitored applications and infrastructure with Splunk, Kibana, and Grafana, performed root cause analysis, and resolved build, configuration, and environment issues.
- **Source, Artefacts & Reporting:** Managed Git-based source control and artefacts, automated recurring operational tasks and batch jobs, and developed scripts and reports for infrastructure analysis.

I am comfortable managing multiple highly available environments, collaborating across engineering, testing, and operations teams, and providing documentation and knowledge transfer. I am confident I can support HSBC's release and production engineering goals from day one.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

Ishwar Kalmegh
