7 October 2026
Hiring Team, ITC Infotech
Bengaluru, India

Dear Hiring Team,

I am writing to apply for the **AWS Site Reliability Engineer** role. As a Site Reliability and DevOps engineer with 3+ years of experience managing and supporting production-critical AWS infrastructure, I am drawn to ITC Infotech's focus on reliable, highly available, and secure cloud operations, and I would be glad to bring my operational ownership to your L3 team.

My experience aligns closely with the responsibilities in this role:

- **AWS Operations & High Availability:** Managed production AWS environments across EC2, VPC, S3, IAM, RDS, ELB, and EKS, designing for uptime, scalability, and resource/cost optimization.
- **Monitoring, Incident & RCA:** Set up monitoring with CloudWatch, Grafana, and ELK, handled critical P1/P2 escalations, and led root cause analysis to prevent recurrence.
- **Automation & IaC:** Automated provisioning and operational tasks with Terraform, Ansible, Jenkins, and Python/Bash scripting, reducing manual toil and improving consistency.
- **Security & Compliance:** Applied IAM least-privilege policies, firewall and networking controls, and patching practices aligned with security and compliance requirements.

I enjoy owning incidents end to end, documenting clear RCAs, and driving automation and operational excellence. I am confident I can support ITC Infotech's cloud operations, mentor L1/L2 engineers, and contribute to architecture and optimization initiatives from day one.

Thank you for your time and consideration. I look forward to discussing how I can contribute to your team.

Sincerely,

Ishwar Kalmegh
