7 October 2026
Hiring Team, JPMorganChase
Hyderabad, India

Dear Hiring Team,

I am writing to apply for the **Infrastructure Engineer II** role within the Cybersecurity & Tech Controls team. As an infrastructure and platform engineer with 3+ years of applied experience, I am excited by the opportunity to deliver reliable, secure, and well-documented infrastructure solutions for JPMorganChase's enterprise platforms.

My experience aligns closely with the responsibilities and required skills:

- **Infrastructure Performance & Monitoring:** Tested infrastructure performance, verified requirements post-deployment, and collected and analyzed monitoring data in test and production using CloudWatch, Prometheus, Grafana, and ELK.
- **Cloud & Automation:** Provisioned and managed AWS compute, storage, networking, and messaging using Terraform and CloudFormation, and automated operations with Python, Java, and shell scripting.
- **Deployment & CI/CD:** Integrated infrastructure and application changes into CI/CD pipelines, containerized services with Docker, and deployed to Kubernetes/EKS with testing framework gates.
- **Systems & Support:** Administered Linux and Windows platforms, handled end-user and production issues via ServiceNow/Jira, and used enterprise AI tooling to accelerate analysis and documentation while validating outputs.

I work collaboratively in Agile teams, communicate clearly across upstream and downstream systems, and escalate appropriately. I am confident I can contribute to the Cybersecurity & Tech Controls team from day one and grow into broader infrastructure ownership.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

Ishwar Kalmegh
