8 October 2026
Hiring Team, JPMorgan Chase
Bengaluru, Karnataka, India

Dear Hiring Team,

I am writing to apply for the **Site Reliability Engineer II** role within the Commercial & Investment Bank. As a reliability-focused engineer with 3+ years of applied experience, I am excited by the opportunity to ensure the reliability of services at one of the world's most iconic financial institutions.

My experience aligns closely with the responsibilities and required skills:

- **SRE & Observability:** Applied SLO/SLI-driven monitoring and alerting with Dynatrace, Grafana, Splunk, and Prometheus, implementing observability to improve transparency and analysis.
- **Incident Response & RCA:** Led triage, debugging, and root cause analysis for P1/P2 incidents, using enterprise AI/Copilot tooling to speed up triage, troubleshooting, and post-incident analysis.
- **Toil Elimination & Code:** Wrote high-quality, maintainable automation in Python and Java, and recognized recurring toil from operational signals to drive measurable reliability improvements.
- **Cloud, Containers & Data:** Maintained cloud-based AWS infrastructure with Kubernetes and Docker, integrated Kafka/MQ messaging, and worked with relational databases including SQL Server, Oracle, and PostgreSQL.

I am comfortable working in Agile environments with strong CI/CD practices, value attention to detail, and work independently on small-to-medium projects while collaborating effectively across teams. I am confident I can contribute to JPMorgan Chase's reliability goals from day one.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

Ishwar Kalmegh
