PROFESSIONAL SUMMARY

Site Reliability Engineer with 3+ years in **Application Performance Monitoring** and observability — operating production monitoring stacks, building dashboards and alerts, and supporting internal engineering teams as first-line users of the tooling. Hands-on with **Dynatrace**, **AppDynamics**, **Datadog**, and **New Relic** for APM, and **synthetic monitoring** for end-user availability and performance. Confident on **Linux**, fluent in distributed application fundamentals, and able to write and revise automation in **Python**, **Perl**, and **bash**. Runs containers on **Kubernetes** across **AWS** and **Microsoft Azure**, participates in an **on-call** rotation, resolves incidents to root cause, and writes the technical documentation that makes a monitoring platform usable by the teams relying on it.

SKILLS

APM	Dynatrace, AppDynamics, Datadog, New Relic, service maps, custom metrics
Digital Exp.	Synthetic monitoring, uptime checks, RUM, Pingdom, SLA & availability reporting
Observability	Prometheus, Grafana, Loki, OpenTelemetry, distributed tracing, Node Exporter, ELK/OpenSearch
Scripting	Python, bash/shell, Perl, PowerShell, cron & schedulers, REST API automation
Platform	Linux (RHEL, Ubuntu), Windows Server, networking, TCP/IP, DNS, troubleshooting
Cloud	Amazon Web Services (AWS), Microsoft Azure, GCP; VPC, IAM, load balancers, SQS, API Gateway, EventBridge
Containers	Docker, Docker Swarm, Kubernetes (K8s)
Distributed Sys	Microservices, concurrency, fault tolerance, queues, caching, service-to-service calls
SRE Practice	SLOs & error budgets, incident response, root cause analysis, on-call rotation, runbooks
Working Style	Internal customer support, requirements gathering, technical documentation, time management, security awareness

WORK EXPERIENCE

Techsurvi Pvt. Ltd.

Nov 2025 – Present

Site Reliability & DevOps Engineer

- Own the production monitoring stack — **Prometheus**, **Grafana**, **Loki**, **Node Exporter**, **cAdvisor** — centralising metrics, logs, and dashboards across services, with alerts on latency, error rate, and saturation.
- Provide day-to-day usage and configuration support for monitoring tooling to internal engineering teams, from dashboard requests and alert tuning through to onboarding a new service into the stack.
- Automate monitoring and remediation tasks in **Python** and **bash** — health checks, scrape configuration, alert routing — and maintain the detailed technical documentation and runbooks the on-call rotation depends on.
- Operate containerized services on **Docker** and **Kubernetes** across **AWS** and **Azure**, troubleshooting availability and performance issues in production and taking part in the **on-call** rotation.
- Built a concurrent **Go** load-testing service (**goroutines**, **mutexes**, **wait groups**) for capacity analysis, improving availability by **60%**.
- Created event-driven architecture for a client using **AWS** (**Lambda**, **SQS**, **API Gateway**), handling 10K+ requests/day and reducing latency by **40%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.
- Created a **GDPR**-compliant webhook system using **SQS**, **Lambda**, and **EventBridge**, processing 5K webhooks/day with dead-letter handling and replay strategy.

Skyfunnel.ai

Dec 2024 – Oct 2025

Software Development Engineer

- Diagnosed and resolved 100+ production incidents across a distributed **Node.js/tRPC/PostgreSQL** stack, cutting resolution time by **40%** through systematic debugging and root cause analysis.
- Improved reliability and throughput with exponential backoff retries, idempotent processing, and a concurrent **Go** validation service, cutting backend load **30%**.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.

Jan 2024 – Dec 2024

Full Stack Developer

- Developed scalable applications with **React**, **Node.js**, and **PostgreSQL**.
- Integrated the **PhonePe API** with secure transaction handling.
- Delivered an **Electron** desktop app for synchronized **MongoDB** and **PostgreSQL** data management.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub

Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub
Next.js • Supabase • PostgreSQL • Vapi

- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo
Go • Ebiten • Game Development

- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
