MetLife Hiring Team
Pune, Maharashtra

Subject: Application for AI Engineer Role

Dear Hiring Team,

I am writing in response to your AI Engineer opening at MetLife. With 3+ years of experience building scalable backend systems, cloud infrastructure, and production services, I have a strong foundation in Python, FastAPI, Go, and distributed systems that aligns well with your requirements.

My experience includes designing production APIs, building automated CI/CD pipelines with Docker and Kubernetes, implementing observability with Prometheus/Grafana, and developing high-performance services on cloud platforms. I am particularly excited about your focus on building agentic AI workflows, RAG systems, and deploying production agents on frontier models. My background in DevOps and backend engineering positions me well to deliver reliable, low-latency AI features end-to-end.

I am drawn to MetLife's New Frontier strategy and commitment to using AI as a responsible partner to enhance customer experience while maintaining trust and inclusion. I would welcome the opportunity to contribute to building Azure-based AI solutions that create a more confident future.

Please find my resume attached for your review. I look forward to discussing how I can support MetLife's AI initiatives.

Sincerely,
Ishwar Kalmegh
