Hiring Team, Persistent Systems
Bengaluru, India

Dear Hiring Team,

I am writing to apply for the **DevOps Engineer** position in Bengaluru. As a DevOps engineer with 3+ years of experience managing CI/CD pipelines, AWS infrastructure, and production deployments, I am excited by Persistent's platform-driven engineering work and the opportunity to support reliable, scalable, and secure delivery for enterprise clients.

My experience maps closely to the responsibilities in this role:

- **CI/CD & Jenkins:** Built and maintained secure pipelines with Jenkins-compatible stages and GitHub Actions to automate build, test, and deployment across production and non-production environments.
- **AWS & Infrastructure as Code:** Provisioned and managed AWS resources using Terraform, and worked with EKS, RDS, ElastiCache, S3, VPC/Subnet, and firewall/IAM controls to keep environments reliable and secure.
- **Containers & NGINX:** Deployed containerized workloads on Kubernetes (EKS) and Docker Swarm, and configured NGINX as a reverse proxy for routing and load balancing.
- **Observability & Incident Response:** Set up monitoring and logging with ELK, Grafana, OpenSearch, and Prometheus, and resolved P1/P2 production incidents through systematic Linux/Unix troubleshooting and Python/Bash automation.

I enjoy owning deployments end to end, improving observability, and reducing operational toil through automation.

I would be glad to bring the same ownership and troubleshooting rigor to Persistent's DevOps team and grow with your culture of continuous learning and certification.

Thank you for your time and consideration. I look forward to the opportunity to discuss how I can contribute.

Sincerely,

Ishwar Kalmegh
