Persistent Hiring Team
Persistent Systems

Application for Golang Full Stack Developer

Dear Persistent Hiring Team,

I am writing to express my strong interest in the Golang Full Stack Developer position at Persistent. With hands-on experience building scalable full-stack web applications using Go, React, RESTful APIs, microservices, AWS, Docker, and Kubernetes, I am excited by the opportunity to contribute to Persistent's mission of helping market leaders transform their industries.

My experience aligns well with Persistent's focus on secure, high-performance, and scalable business solutions. I have hands-on expertise designing and developing RESTful APIs and business logic using Golang, building modern user interfaces with React.js, and deploying cloud-native applications on AWS. I have strong knowledge of relational databases such as MySQL and PostgreSQL and NoSQL databases such as MongoDB, along with experience in CI/CD, Docker containerization, Kubernetes orchestration, and Agile/Scrum delivery environments.

What particularly attracts me to Persistent is the opportunity to work on scalable microservices and distributed application components for market-leading clients across cloud platforms. I am eager to bring my full-stack development fundamentals, API design skills, and cloud deployment experience to help deliver reliable, high-performance software solutions.

I am confident that my experience with Golang, React, AWS, and microservices architecture, combined with my commitment to delivering scalable and secure software, makes me a strong fit for this role. I look forward to the possibility of discussing how I can contribute to Persistent's engineering team.

Best regards,

Ishwar Kalmegh
