QAD | Redzone Hiring Team
Pune, Maharashtra

Subject: Application for Software Engineer, Full Stack (Python & Golang) Role

Dear Hiring Team,

I am excited to apply for the Software Engineer role on the ChampionAI platform team. With 3+ years of experience building scalable backend services in Python and Go, I have a strong foundation in FastAPI, async programming, PostgreSQL, Docker, and Kubernetes that aligns well with your requirements.

I enjoy building developer tooling and platform capabilities that help teams ship faster and more reliably. My experience with concurrent systems in Go, clean API design in FastAPI, and focus on testing and observability positions me well to support the MCP tool server, agent infrastructure, and help Applied AI teams build and deploy Champion agents correctly.

I am drawn to QAD | Redzone's mission of redefining manufacturing through intelligent, adaptive platforms. I would welcome the opportunity to contribute to ChampionAI by improving DX, enforcing quality in agent implementations, and building robust platform features that deliver measurable value.

Please find my resume attached. I look forward to discussing how I can support the ChampionAI platform team.

Sincerely,
Ishwar Kalmegh
