Hiring Team, Rapid7
Pune, India

Dear Hiring Team,

I am writing to apply for the **Software Engineer II - DevOps** role on the Platform Operations team. As a platform and reliability-focused engineer with 3+ years of experience, I am excited by the opportunity to help Rapid7 build, operate, and scale the secure, reliable infrastructure behind the Insight platform, including its FedRAMP-authorized environment.

My experience aligns closely with the responsibilities of this role:

- **Cloud Platform & IaC:** Built, operated, and scaled AWS infrastructure across EC2, VPC, S3, RDS, and EKS using Terraform, provisioning as code with security and scalability in mind.
- **Linux, Containers & Orchestration:** Administered and tuned Linux systems and ran containerized microservices on Kubernetes (EKS) with Docker and Helm.
- **Observability & SRE:** Defined alerts and tracked performance metrics with Grafana, Prometheus, ELK, and CloudWatch, and participated in on-call rotation, incident response, and post-incident RCA to improve MTTR.
- **Automation & CI/CD:** Automated operations with Python/Bash and Ansible, and maintained CI/CD and GitOps-style deployment pipelines to ship changes reliably.

I take ownership of unfamiliar systems and runbooks, break large operational goals into achievable steps, and collaborate closely across teams and boundaries. I would be glad to bring this accountability and automation mindset to Rapid7's platform team.

Thank you for your time and consideration. I look forward to discussing how I can contribute.

Sincerely,

**Ishwar Kalmegh**
