PROFESSIONAL SUMMARY

Golang Engineer with 3+ years of experience building, debugging and shipping production systems in **Go** on **Linux**. Hands-on with **Go modules**, **semantic versioning**, **dependency management**, **go build** and **go test** — upgrading third-party libraries, resolving dependency conflicts and version compatibility issues, fixing breaking API changes across downstream call sites, and troubleshooting compilation, linker and test failures. Experienced with **Git** change management, merge conflicts and code review, **Bash** automation, and **CI/CD** presubmit pipelines gating every merge.

SKILLS

Languages	Go, Python, Bash, TypeScript, JavaScript, SQL
Go	Go modules (go.mod, go.sum, MVS, semantic versioning), go build, go test, goroutines, channels, sync primitives, stdlib, benchmarks, pprof profiling, race detector
Dependencies & Upgrades	Dependency-tree analysis, OSS package upgrades, transitive dependency resolution, version conflict resolution, replace/exclude directives, breaking API changes, API migration, vulnerability remediation
Debugging	Build and compile failures, linker errors, flaky tests, race conditions, goroutine and memory leaks, stack traces, pprof, root-cause analysis
Linux & Scripting	Ubuntu, Debian, Bash/shell scripting, make, process and file-system management, TCP/IP networking, build automation
Git & Workflow	Git, branching, rebasing, merge-conflict resolution, patch management, code review, large-codebase change scoping, migration documentation
CI/CD	GitHub Actions, presubmit checks, build and test gating, Docker, Docker Swarm, Kubernetes
Backend & Cloud	REST APIs, Node.js, Express.js, tRPC, GraphQL, PostgreSQL, MongoDB, AWS (EC2, Lambda, RDS, ECR, S3)

WORK EXPERIENCE

Techsurvi Pvt. Ltd.

Nov 2025 – Present

Backend & DevOps Engineer

- Built automated **CI/CD** pipelines with **Docker**, **Docker Swarm** and **GitHub Actions**, where build, test and presubmit stages gate every merge and keep integration failures isolated and fast.
- Upgraded third-party libraries and dependencies across services, resolving version conflicts and updating call sites for breaking API changes while keeping downstream services on stable, tested releases.
- Developed a concurrent **Go** stress-testing application using **Goroutines**, **Mutexes** and **WaitGroups**, improving availability by **60%**, and profiled it with **pprof** to eliminate goroutine and memory leaks.
- Designed and developed the backend architecture of a **Node.js** (**Express**, **GraphQL**) application with average API latency of **150 ms** on **AWS** (**EC2**, **Lambda**, **RDS**, **ECR**, **CloudFront**, **S3**).
- Created event-driven architecture for a client using **AWS** (**Lambda**, **SQS**, **API Gateway**), handling 10K+ requests/day and reducing latency by **40%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.
- Created a **GDPR**-compliant webhook system using **SQS**, **Lambda**, and **EventBridge**, processing 5K webhooks/day with dead-letter handling and replay strategy.

Skyfunnel.ai

Dec 2024 – Oct 2025

Software Development Engineer

- Debugged compile, build and test failures across Go and Node.js services — stack traces, failing dependencies, race conditions — resolving **100+** production issues and cutting bug resolution time by **40%**.
- Built a concurrent **Go** email validation service using goroutines and worker pools, reducing backend load by **30%**.
- Developed production backend services and **REST** APIs using **tRPC** and **PostgreSQL**, covered by unit and integration tests.
- Enhanced **WhatsApp** and **Email** delivery using exponential backoff retry mechanisms for reliability under failure.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.

Jan 2024 – Dec 2024

Full Stack Developer

- Migrated a large legacy codebase from an outdated frontend stack to **React** + **Tailwind CSS** — upgrading package versions, adapting code to breaking API changes and validating the migration across the whole app, improving performance by **20%**.
- Integrated the **PhonePe API** with secure transaction handling and input validation.
- Developed an **Electron** desktop application for synchronized **MongoDB** and **PostgreSQL** data management.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub

Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub

Next.js • Supabase • PostgreSQL • Vapi

- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo

Go • Ebiten • Game Development

- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
