PROFESSIONAL SUMMARY

Backend Engineer with 3+ years building and operating high-scale production systems end to end, owning outcomes from design through production. Hands-on in **Go** and **Node.js**/**TypeScript**: high-throughput event-driven services on **Kafka**/**Redpanda** (partitioning, consumer groups, ordering, idempotency, replay, backpressure), resilient **APIs** and **webhook** integrations that tolerate duplicate and out-of-order delivery, and reliable background workers with queues, scheduling and failure recovery. Data models across **ClickHouse**, **MongoDB**, **PostgreSQL**/**RDS** and **Redis** on **AWS**. **AI-native** in practice — shipping **LLM** features with structured outputs, tool calling, **RAG** and offline **evaluation**, and using **AI-assisted engineering** for code, tests and debugging, verifying every result independently.

SKILLS

Languages	Go, TypeScript, JavaScript, Python, SQL, Bash
Backend	Node.js, Express, NestJS, Fastify, tRPC, REST & GraphQL APIs, webhooks
Streaming	Apache Kafka, Redpanda, partitioning, consumer groups, ordering, idempotency, replay, backpressure
Data Stores	ClickHouse, MongoDB, PostgreSQL/Amazon RDS, Redis, Elasticsearch, Prisma
Jobs & Queues	BullMQ/Bull-style queues, schedulers, workers, rate limiting, DLQ, failure recovery
Cloud	AWS (EC2, S3, RDS, Lambda, SQS, ECR, CloudFront), VPC, IAM
AI / LLM	GenAI, RAG, agent workflows, tool/function calling, structured outputs, MCP, eval harnesses
Observability	OpenTelemetry, distributed tracing, Prometheus, Grafana, Loki, metrics/logs/traces, incident RCA
Platform	Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, microservices, concurrency, fault tolerance

WORK EXPERIENCE

Techsurvi Pvt. Ltd.

Nov 2025 – Present

Backend & DevOps Engineer

- Designed and built high-throughput backend services in **Node.js**/**TypeScript** (**Express**, **GraphQL**) and **Go** on **AWS** (**EC2**, **RDS**, **S3**, **ECR**, **Lambda**), with average API latency of **150 ms**.
- Built **Kafka** event pipelines with partition-keyed ordering, consumer groups, idempotent processing, retry/backoff, dead-letter replay and backpressure control.
- Owned data modelling and workload performance across **MongoDB**, **PostgreSQL**/**RDS**, **Redis** and **ClickHouse**, and shipped releases via automated **CI/CD** (**Docker**, **GitHub Actions**).
- Operated production with centralised metrics, logs and traces (**Prometheus**, **Grafana**, **Loki**), and built a concurrent **Go** load-testing service (**Goroutines**, **Mutexes**) that improved availability by **60%**.
- Created event-driven architecture for a client using **AWS** (**Lambda**, **SQS**, **API Gateway**), handling 10K+ requests/day and reducing latency by **40%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.
- Created a **GDPR**-compliant webhook system using **SQS**, **Lambda**, and **EventBridge**, processing 5K webhooks/day with dead-letter handling and replay strategy.

Skyfunnel.ai

Dec 2024 – Oct 2025

Software Development Engineer

- Built production messaging and automation services with **Node.js**/**tRPC** and **PostgreSQL**, using queue-backed delivery, scheduling and backoff retries.
- Shipped an **LLM**-powered real-time voice agent with streaming conversations, structured tool calls and streaming state handling.
- Diagnosed production incidents across the distributed stack — 100+ resolved, resolution time down **40%** via systematic debugging and root-cause analysis.
- Built a concurrent **Go** high-volume validation service reducing backend load by **30%**.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.

Jan 2024 – Dec 2024

Full Stack Developer

- Developed scalable applications with **React**, **Node.js**, and **PostgreSQL**.
- Integrated the **PhonePe API** with secure transaction handling.
- Built an **Electron** app for synchronized **MongoDB** and **PostgreSQL** data management.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub

Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub

Next.js • Supabase • PostgreSQL • Vapi

- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo

Go • Ebiten • Game Development

- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
