PROFESSIONAL SUMMARY

Site Reliability Engineer with 3+ years keeping production infrastructure stable, performant, secure, and compliant — hosting services on-prem and in the cloud, building observability in from the start, and driving incidents to root cause. Hands-on with enterprise **messaging** and **message queues** (**IBM MQ**, Kafka, RabbitMQ, Redis Streams) including queue depth, throughput tuning, dead-letter recovery and delivery guarantees. Builds hosting and deployment platforms on **Microsoft Azure** and **AWS**, containerized with **Docker** and **Kubernetes**, delivered through **GitLab CI/CD**, **Jenkins** and **GitHub Actions**, and automated with **Bash**, **Python**, **Ansible** and **Terraform**. Works in **agile/Scrum** teams on functional and non-functional requirements, and uses **AI** to accelerate build, delivery, and troubleshooting workflows — validating every output against policy before it is used.

SKILLS

Messaging	IBM MQ, Apache Kafka, RabbitMQ, Redis Streams, queues, topics, DLQ, pub/sub, delivery semantics
Cloud	Microsoft Azure (VMs, AKS, App Service, Blob Storage, Functions), AWS (EC2, S3, RDS, Lambda, VPC), SQS, API Gateway, EventBridge
Containers	Docker, Docker Swarm, Kubernetes, Azure Kubernetes Service (AKS), Helm
CI/CD	GitLab CI/CD, Jenkins, GitHub Actions, Maven/Gradle packaging, artifact repositories, automated testing, releases
Observability	Prometheus, Grafana, Loki, Node Exporter, cAdvisor, OpenTelemetry, ELK/OpenSearch, Azure Monitor
Automation	Bash/shell scripting, Python, PowerShell, cron & schedulers, Terraform, Ansible, ARM/Bicep, configuration management
Systems	Linux/UNIX, TCP/IP, DNS, networking, performance tuning, capacity planning, high availability
Delivery	Agile, Scrum, SDLC, functional & non-functional requirements, incident response, RCA, documentation

WORK EXPERIENCE

Techsurvi Pvt. Ltd.

Nov 2025 – Present

Infrastructure & DevOps Engineer

- Build and operate application hosting services in **Docker**/**Docker Swarm** and **Kubernetes**, deploying containerized Node.js services with health checks, autoscaling, and zero-downtime releases.
- Own **GitLab CI/CD** and **GitHub Actions** pipelines that build, package, test, and deploy product artifacts — source to image to running container — with testing gates and rollback.
- Built observability into the platform with centralised metrics, logs and dashboards (**Prometheus**, **Grafana**, **Loki**, **cAdvisor**) so production health is measurable and incidents surface before users see them.
- Automated **message-queue** health checks and dead-letter recovery with **Bash**/**Python**, and hardened **Linux** hosts, network security and data encryption for policy compliance.
- Built a concurrent **Go** load-testing service (**Goroutines**, **Mutexes**, **WaitGroups**) for capacity analysis, improving availability by **60%**.
- Created event-driven architecture for a client using **AWS** (**Lambda**, **SQS**, **API Gateway**), handling 10K+ requests/day and reducing latency by **40%**.
- Created **AWS** billing alerts that kept monthly cloud spend within the **$5K** limit, preventing budget overruns.
- Migrated the **MySQL RDS** database from version **8.0** to **8.4** with zero downtime, improving query performance by **25%**.
- Created a **GDPR**-compliant webhook system using **SQS**, **Lambda**, and **EventBridge**, processing 5K webhooks/day with dead-letter handling and replay strategy.

Skyfunnel.ai

Dec 2024 – Oct 2025

Software Development Engineer

- Operated production **message-queue** services for **WhatsApp** and **Email** delivery — queue-backed processing, scheduled jobs, backoff retries, and dead-letter handling.
- Resolved 100+ production incidents, reducing resolution time by **40%** through systematic debugging, runbooks, and root-cause analysis.
- Improved reliability and throughput of asynchronous processing, cutting backend load **30%** with a concurrent **Go** validation service.
- Created a Zapier-like event automation feature that triggers **200+** emails per event, reducing manual notification effort by **60%**.

Bizonance India Pvt. Ltd.

Jan 2024 – Dec 2024

Full Stack Developer

- Developed scalable applications with **React**, **Node.js**, and **PostgreSQL**.
- Integrated the **PhonePe API** with secure transaction handling.
- Built an **Electron** desktop app for synchronized **MongoDB** and **PostgreSQL** data management.
- Migrated the complete server from Windows to the Linux (Hostinger) hosting platform, cutting hosting costs by **30%** and improving uptime to **99.9%**.

PROJECTS

RSS Post Scraper in Go | GitHub

Go • Chi • PostgreSQL • Goose • sqlc

- Built an RSS feed scraper with database migrations and type-safe SQL generation.

Voice-Based AI Chat Application | GitHub
Next.js • Supabase • PostgreSQL • Vapi
- Developed a real-time AI voice assistant with streaming conversations and secure authentication.

Rulers of the Sky (Go + Ebiten) | GitHub | Live Demo
Go • Ebiten • Game Development
- Developed a retro-style 2D aerial combat game featuring sprite animation, scrolling backgrounds, enemy AI, projectiles, and collision detection using **Go** and **Ebiten**.
